程序代写代做 CS编程辅导

SQL general syntax

程序代写代做 CS编程辅导

- A single statement is terminated with SEMICOLON.
- Predefined KEYWORDS are present clauses (components) of a statement.
- Keywords are NOT case sensitive.
- Examples:

```
CREATE TABLE unit
(
    unit_code    CHAR(7) NOT NULL,
    unit_name    VARCHAR2(50) CONSTRAINT uq_unit_name UNIQUE NOT NULL,
    CONSTRAINT pk_unit PRIMARY KEY (unit_code)
);

SELECT * FROM student;
```

SQL Statements

程序代写代做 CS编程辅导

▪ Data Definition Language (DDL)

- Creating database.

- CREATE TABLE, ALTER TABLE, DROP TABLE

▪ Data Manipulation Language (DML)

- Adding and Manipulating database contents (rows).

- INSERT, UPDATE, DELETE

- Retrieving data from database

- SELECT

▪ Data Control Language (DCL)

- GRANT

 QQ: 749389476
<https://tutorcs.com>
- A. A student enrolls in a maximum of one unit.
 - B. An enrolment record is created for a particular student of a unit in a given semester and year.
 - C. A student can have more than one grade for a given unit.
 - D. A unit can only have a single student enrolled.
 - E. More than one option in a to d is correct.

Assignment Project Exam Help

Q2. What relational model component(s) is/are defined in the above create table statement?

WeChat: cstutorcs
<https://powcoder.com>

- A. Relation, Attribute, Domain
- B. Primary Key
- C. Foreign Key
- D. Referential integrity constraint
- E. All of the options in a-d are correct.
- F. Some of the options in a-d are correct.

QQ: 749389476

<https://tutorcs.com>

Common ORACLE data types

■ **Text:** CHAR(size), VARCHAR2(size)

– e.g., CHAR(10), VARCHAR2(10)

– CHAR(10) → 'apple' → 'apple' (padded with spaces)

– VARCHAR2(10) → 'apple' → 'apple' (not padded)

Assignment Project Exam Help

■ **Numbers:** NUMBER(precision, scale)

– Weight NUMBER(7) or NUMBER(7,0) → Weight = 7456124

– Weight NUMBER(9,2) → Weight = 7456123.89

– Weight NUMBER(8,1) → Weight = 7456123.9

WhatsApp tutorcs
<https://powcoder.com>
Assignment Project Exam Help
Add WeChat powcoder
Email: tutorcs@163.com

■ **Data/Time:** DATE, TIMESTAMP

– DATE can store a date and time (time to seconds), stored as Julian date

– TIMESTAMP can store a date and a time (up to fractions of a second)

– TIMESTAMP WITH TIME ZONE

QQ: 749389476

<https://tutorcs.com>

Column VS Table Level Constraints

```
CREATE TABLE STUDEN
```

```
stu_nbr NUMBER(6) NOT NULL,
```

```
stud_lname VARCHAR2(50) NOT NULL,
```

```
stud_fname VARCHAR2(50) NOT NULL,
```

```
stu_dob DATE NOT NULL,
```

```
CONSTRAINT STUDEN_PK PRIMARY KEY (stu_nbr)
```

```
);
```

column constraints

table constraint

STUDENT		
P *	STU_NBR	NUMERIC (8)
*	STU_LNAME	VARCHAR (50)
*	STU_FNAME	VARCHAR (50)
*	STU_DOB	Date

Q3. What would be the correct order of the CREATE TABLE statements in the schema script to successfully create a database based on the above diagram? (assuming that we will define the FK as part of the create table statement)

- A. UNIT, ENROLMENT, STUDENT
- B. ENROLMENT, STUDENT, UNIT
- C. STUDENT, UNIT, ENROLMENT
- D. UNIT, STUDENT, ENROLMENT
- E. More than one option is correct

程序代写代做 CS编程辅导

CREATE TABLE student

```
(
  stu_nbr    NUMBER(8) NOT NULL,
  stu_lname  VARCHAR(50) NOT NULL,
  stu_fname  VARCHAR(50) NOT NULL,
  stu_dob    DATE NOT NULL,
  CONSTRAINT pk_student PRIMARY KEY (stu_nbr)
);
```

CREATE TABLE unit

```
(
  unit_code  CHAR(8) NOT NULL,
  unit_name  VARCHAR(50) CONSTRAINT uq_unit_name UNIQUE NOT NULL,
  CONSTRAINT pk_unit PRIMARY KEY (unit_code)
);

```

CREATE
TABLE enrolment
(
    stu_nbr          NUMBER(8) NOT NULL,
    unit_code        CHAR(8)   NOT NULL,
    enrol_year       NUMBER(4) NOT NULL,
    enrol_semester   CHAR(2)   NOT NULL,
    enrol_mark       NUMBER(3),
    enrol_grade      CHAR(2),
    CONSTRAINT pk_enrolment PRIMARY KEY (stu_nbr, unit_code, enrol_year, enrol_semester),
    CONSTRAINT fk_enrolment_student FOREIGN KEY (stu_nbr) REFERENCES student (stu_nbr),
    CONSTRAINT fk_enrolment_unit FOREIGN KEY (unit_code) REFERENCES unit (unit_code)
);
    
```

Alternative method of defining PKs

程序代写代做CS编程辅导

```
CREATE
TABLE enrolment
(
  stu_nbr          NUMBER(10) NOT NULL,
  unit_code        CHAR(8) NOT NULL,
  enrol_year       NUMBER(4) NOT NULL,
  enrol_semester   CHAR(2) NOT NULL,
  mark            NUMBER(8),
  grade            CHAR(2),
  CONSTRAINT pk_enrolment PRIMARY KEY
    (stu_nbr, unit_code, enrol_year, enrol_semester)
);
```

```
( CONSTRAINT fk_enrolment_student FOREIGN KEY (stu_nbr)
REFERENCES student ( stu_nbr),
  CONSTRAINT fk_enrolment_unit FOREIGN KEY (unit_code) REFERENCES unit
    (unit_code));
```

Referential Integrity

程序代写代做 CS编程辅导

- To ensure referential integrity, SQL defines three possible actions for FKs in relations when a deletion of a primary key occurs:
 - RESTRICT (Oracle) and NO ACTION (MySQL) are basically equivalent
 - Deletion of a tuple in the table containing the PK is NOT ALLOWED for those tuples in the table referred by the FK (the table containing FK) if there is corresponding tuple in the table containing the FK.
 - CASCADE
 - A deletion of a tuple in the table referred by the FK (the table containing FK) will result in the deletion of the corresponding tuples in the table containing the FK.
 - NULLIFY
 - A deletion of a tuple in the table referred by the FK (the table containing PK) will result in the update of the corresponding tuples in the table containing the FK to NULL.

The screenshot shows the 'Relation Properties - team_employee' dialog box. The 'General' tab is active. The 'Name' field is 'team_employee'. The 'Use surrogate keys' checkbox is unchecked. The 'Source Cardinality' section shows 'Source' as 'TEAM' and 'Source key' as 'TEAM.TEAM PK'. The 'Name on Source' field is 'consists'. The 'Source Entity Synonym' is 'TEAM'. The 'Source to Target Cardinality' is '1:M'. The 'Source Optional' checkbox is unchecked. The 'Transferable' checkbox is checked. The 'Dominant Role' is 'None'. The 'Identifying' checkbox is unchecked. The 'Delete Rule' dropdown menu is open, showing options: NO ACTION, CASCADE, SET NULL, and RESTRICT. The 'NO ACTION' option is selected.

程序代写代做 CS编程辅导

Q5. Assume that the table ENROLMENT contains enrolment details for students in FIT2094 and FIT2001. The referential integrity constraint is **CASCADE**. What would happen to tuples in ENROLMENT with the unit_code='FIT2094' when we delete the FIT2094 record from UNIT?

- A. They will be deleted.
- B. The value of unit_code will be updated to NULL.
- C. The deletion is not possible, the DBMS will prevent the deletion.
- D. None of the above.

程序代写代做 CS编程辅导

Q6. What would happen to the student record with stu_nbr='1234' in the STUDENT table when we delete all tuples with stu_nbr='1234' in the ENROLMENT table? (Assume referential integrity is CASCADE constraints)

- A. Student record with stu_nbr='1234' in the STUDENT table will be deleted.
- B. Nothing will happen to the STUDENT table.
- C. The stu_nbr='1234' in the STUDENT table will be updated to NULL.
- D. Deletion will not be permitted by the DBMS.

程序代写代做 CS编程辅导

What Referential Integrity Constraint to implement?

- Use the model to decide on what referential integrity constraint to implement.
 - Mandatory vs Optional participation.
- The constraints must be decided at the design phase.

ENROLMENT		
PF *	STU_NBR	NUMERIC (8)
PF *	UNIT_CODE	CHAR (8)
P *	ENROL_YEAR	NUMERIC (4)
	ENROL_MESTER	CHAR (2)
	ENROL_WEEK	NUMERIC (3)
	ENROL_WEEKDAY	CHAR (2)

STUDENT		
P	STU_NBR	NUMERIC (8)
*	STU_LNAME	VARCHAR (50)
*	STU_FNAME	VARCHAR (50)
*	STU_DOB	Date

Q8. Assume the tables have been created with primary and foreign key constraints and there is no data currently in the tables. In what order should we populate the table?

- A. UNIT- > ENROLMENT -> STUDENT
- B. STUDENT -> ENROLMENT -> UNIT
- C. STUDENT -> UNIT -> ENROLMENT
- D. More than one option is correct.

COMMIT and ROLLBACK

程序代写代做CS编程辅导

```
INSERT INTO enrolment (S (112233,  
'FIT2001',1,2018,45,'N'));
```

```
INSERT INTO enrolment (S (112233,  
'FIT2001',1,2018,80,'HD'));
```

```
COMMIT;
```

Assignment Project Exam Help

WeChat: cstutorcs
<https://powcoder.com>

Assignment Project Exam Help
Add WeChat powcoder
Email: tutorcs@163.com

COMMIT makes the changes to the database permanent.

QQ: 749389476

ROLLBACK will undo the changes.

<https://tutorcs.com>

Using a SEQUENCE

程序代写代做 CS编程辅导

- Oracle supports auto-increment of a numeric PRIMARY KEY.
 - SEQUENCE.

- Steps to use:

- Create sequence

```
CREATE SEQUENCE sno_seq  
INCREMENT BY 1;
```

- Access the sequence using two built-in variables (pseudocolumns):

- NEXTVAL and CURRVAL

```
– INSERT INTO student  
VALUES(sno_seq.nextval, 'Bond', 'James',  
       '01-Jan-1994');
```

```
– INSERT INTO enrollment  
VALUES(sno_seq.currval, 'FIT2094', ...);
```

<https://tutorcs.com>

<https://tutorcs.com>

程序代写代做CS编程辅导

Q9. Two new students and their enrolment details need to be added, James Bond wants to enrol in FIT2094 and FIT2001, Bruce Lee only wants to enrol in FIT2094. The sequence for sno is called sno_seq. What problems, if any, exist with the script:

```
-- Add two students
INSERT INTO student VALUES (sno_seq.nextval,'Bond','James','01-Jan-1994');
INSERT INTO student VALUES (sno_seq.nextval,'Lee','Bruce','01-Feb-1994');
-- Add the enrolments
INSERT INTO enrolment VALUES (sno_seq.currval,1,2018,'FIT2094',0,'NA');
INSERT INTO enrolment VALUES (sno_seq.currval,1,2018,'FIT2001',0,'NA');
INSERT INTO enrolment VALUES (sno_seq.currval,1,2018,'FIT2094',0,'NA');
COMMIT;
```

- A. There will be an error message. It states that a violation of primary key constraints in the ENROLMENT has occurred.
- B. Bruce Lee will be enrolled in FIT2001.
- C. There will be NO enrolment record for James Bond.
- D. All of the options a-c are problems that will be caused by the script.
- E. Some of the options in a-c are problems that will be caused by the script.
- F. There will be no problem caused by the script.
